

Airdrie

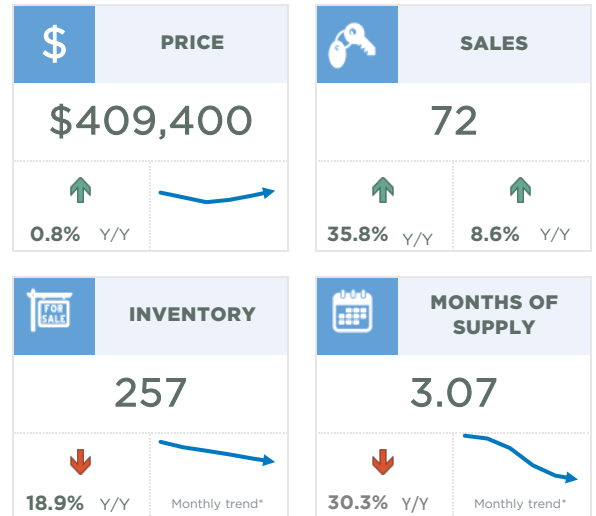

For the fourth consecutive month, year-over-year sales improved. As a result, year-to-date sales for the city total 1,055 units, a nine per cent increase over the previous year. While new listings did rise this month, the improvement in sales outpaced the gains in new listings, preventing any significant shift in monthly inventory levels. However, inventory levels are over 20 per cent lower than last year's levels. And the months of supply have fallen to levels not seen since 2015. While prices remain below previous highs, tighter market conditions over the past four months have supported several months of price growth and September price levels are nearly one per cent higher than last year. These price gains were enough to cause year-to-date levels to stabilize relative to last year.

Cochrane

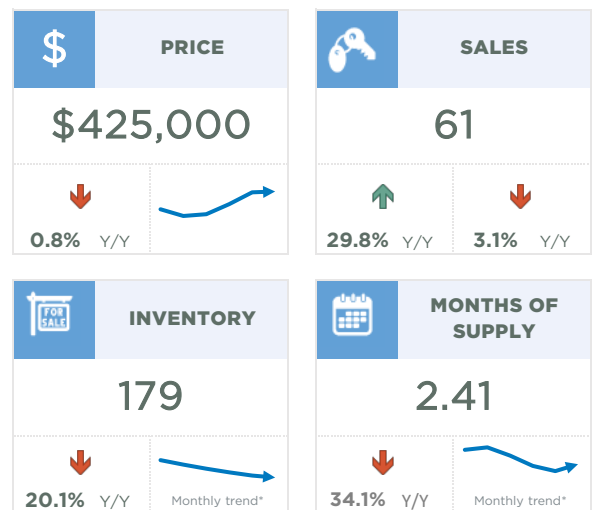

A reduction in new listings limited sales growth in September compared to August. However, September sales remain higher than last year and contributed to a year-to-date gain of nearly nine per cent. Rising sales and easing inventories have kept the months of supply below four months, the lowest level seen since 2014. Tighter market conditions have supported an upward trend in prices over the past three months. The recent price gains did translate to year-over-year gains in September, but were not enough to offset earlier pullbacks, as year-to-date prices remain nearly two per cent lower than last year's levels.

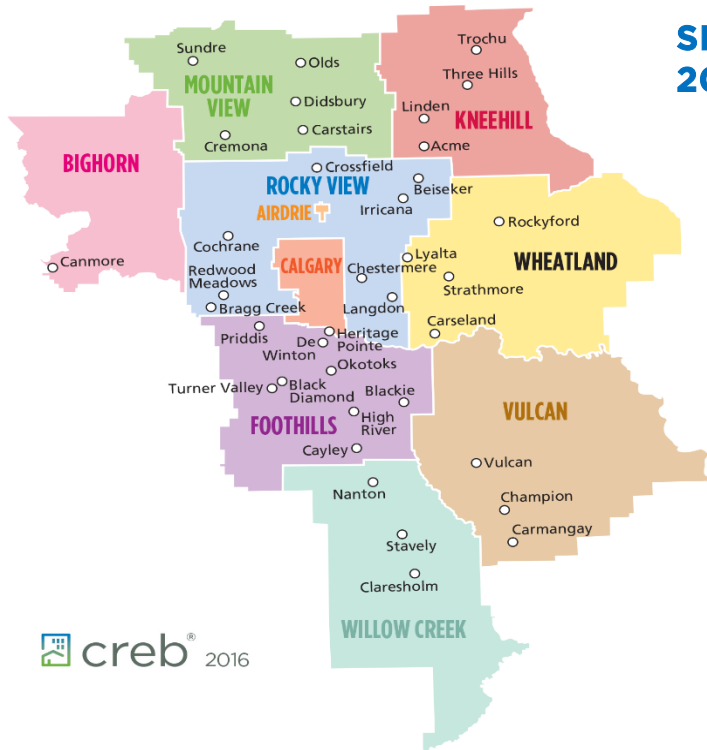

Okotoks

September sales continued to improve from the low levels recorded earlier in the year and levels recorded last September. However, recent improvements were not enough to offset earlier pullbacks. Sales remain three per cent lower than last year's levels, but this could be related to reduced inventory in the market. Reductions in supply relative to demand have caused the months of supply to decline to three months. The tighter market conditions have caused prices to trend up over the past four months. However, both September and year-to-date prices remain lower than previous year's levels.
